

Bojan Stojkovski

Front End

web developer

My name is Bojan Stojkovski, a front end web developer. My professional skill set includes knowledge in HTML5, CSS3, Git, JavaScript and React.js. I also possess basic knowledge in Next.js and TypeScript with native JavaScript, React and Next.js but I feel I've yet to become comfortable with them.

I've completed the front end web development academy and additional 2 months of internship at Brainster, where I was hired full time as a frontend web developer and mentor at the academy.

I have build 3 projects from scratch that are live and I've worked on a few that I've inherited all of which are built in React.js.

I strive to build upon my skills, grow and nurture my network of friends and colleagues, learn as much as possible regarding my profession and interests.

Next Platform

<https://platform.next.edu.mk/>

Online learning and education platform that represents complete learning management system. Has authentication and active session feature, contains learning-paths that are composed of courses and independent courses that track progress. Study fields include Computer Science, Digital Marketing, Data Science and Graphic Design. Offers Course rating system. Interactive quizzes throughout the courses and integrated code editor for practising challenges in Coding courses. Profile management page and features, password recovery. And many other features. Mobile styling written, Tablet styling left out by order from management.

App type:

Web

Technologies:

React.js, styled-components, @reach-router, axios, monaco-editor

Role and responsibilities:

Developed front-end app from scratch to its launch. Project setup and organization. Built configurable and readable as well as commented code for easier maintenance. UX/UI was designed by dedicated designer and implemented by me from a figma project. Continuously worked and contributed to UX in coordination with designer and the rest of the team. Integrated ContextAPI and developed custom hooks. Integrated styled-components and theme. Integrated multiple language feature using i18next and translated MK content to EN. Integrated monaco code editor, social media sharing, npm packages which include react-dynamic-swiper, @reach-router, axios. Animations and transitions hand coded from scratch except from hero section animation which is gif created by designer. Built custom reusable minor and composed components from scratch.

Vouchers 2.0

<https://vauceri.brainster.co/>

Platform offers competitive timed quizzes that are awarding vouchers for Brainster academies. Upon application for an academy, user is navigated into a quiz and has active quiz session. Active session is managed without login and active session.. User cannot start another quiz for a different academy while a quiz session is active. After completing the quiz user is navigated to page that displays results and information on publishing rewards and user is allowed to navigate through application once again. When awards are published, user cannot navigate anywhere else and can only access Awards page where a leaderboard is displayed. Application is fully responsive.

App type:

Web

Technologies:

React.js, styled-components, react-router-v6, axios

Role and responsibilities:

Developed front-end app from scratch to its launch. Project setup and organization. Built configurable and readable as well as commented code for easier maintenance. UX/UI was designed by dedicated designer and implemented by me from a figma project. Continuously worked and contributed to UX in coordination with designer. Integrated ContextAPI for handling global state management and developed custom hooks. Integrated styled-components and theme. Integrated multiple language feature using i18next and translated MK content to EN. Integrated social media sharing, npm packages @reach-router, axios. Animations and transitions hand coded from scratch. Built custom reusable minor and composed components from scratch. Contributed greatly to the frontend-backend communication, business logic and architecture.

Projects

Career Quiz

<https://careers.brainster.co/>

Interactive quiz that determines user's personality type and best suited career field. Applications consists of multiple pages and 2 different quizzes.
